

AGW
SIDEWINDER
Mount System

Installation instructions

1. **WARNING:** Check to be sure your **FIREARM IS UNLOADED.**
 - a. **GUNS WILL KILL YOU IF YOU DON'T PRACTICE FIREARMS SAFETY.**
2. Use a 7/64th hex wrench to remove both 7/64th hex screws.
3. Apply a **non-permanent thread locker** to the threads of both screws.
 - a. This will ensure your *Sidewinder Mount System* does not come loose when discharging your firearm.
 - b. Thread Locker is available at any local hardware store.
 - c. **WARNING:** BE SURE TO USE THREADLOCKER THAT IS **REMOVABLE** OR YOUR **SIDEWINDER MOUNT SYSTEM WILL BE PERMANENTLY ATTACHED TO YOUR FIREARM!**
 - i. **WE RECOMMEND: LOCTITE 242.**
4. Place *Sidewinder Mount System* on the firearm's 1913 Picatinny rail.
 - a. Be sure to place the *Sidewinder Mount System* accordingly so it does not **interfere** with the accessibility of your firearm's **charging handle**.
 - b. For optics mounting, the best position is generally on the receiver, as this part of the firearm attaches directly to the barrel. This will give your optics **the most accurate zero** and rigid mounting base. It will ultimately prevent your zero from drifting.
 - c. **Mounting optics to a firearms handguard generally gives a sub-par mounting base; don't do it!**
5. Snug both 7/64th hex screws **evenly**.
6. Using a torque wrench in **inch pounds**; tighten both 7/64th hex screws to **33 INCH POUNDS**.
7. Mount optics and accessories to your new *Sidewinder Mount System* with the same care and thank you for the purchase: **YOU CAN'T MISS!**
